

v0.11

Combine

- localsettings template for docker changed to reflect use of nginx instead of internal static IP addresses
- mysql port for docker changed to 3307 to facilitate local integration tests run from outside Docker
- added localsettings template for testing
- added new settings LIVY_UI_HOME, SPARK_HOST, ES_UI_HOME, ENABLE_PYTHON, CELERY_RPC_SERVER; removed setting APP_HOST
- set the admin site site_url to '/combine'
- added line to log traceback with errors under DEBUG
- altered Validation Scenario, Transformation Scenario, Field Mapper, and Record Identifier Transformation Scenario to prohibit adding python code by default (can be enabled with server setting ENABLE_PYTHON; existing scenarios will still work but can't be modified without the setting)
- added createsuperuser django management command to facilitate docker build script
- allowed record groups to be sorted by when their most recently run job was run
- fixed local transformation includes on import
- protected actually all the endpoints that should require a login
- TODO: how 2 ssl

Combine-Docker

- HTTPS
- Update elasticsearch (and ES-hadoop connector) to 7.1.1
- Update submodule to MI-DPLA Github URL

- Replace internal static IP addresses with docker-compose network host names and nginx in front of it all
- Merge first_build.sh and update_build.sh into build.sh, which should be idempotent
- Add supervisord to the Celery container in order to enable control from inside the Combine web interface
- Stop exposing Docker image ports to the host machine, except for nginx and in limited cases for automated testing
- Add configuration for letsencrypt SSL/general SSL
- Update spark default files to remove deprecated Java options
- {{{magic strings}}}
